

JRC Plaza
17W428 22nd Street, Oak Brook Terrace, IL

Client: JRC Industries, Inc.
Architect: Architectural Environments
Role: General Contractor

JRC Plaza was constructed as a free-standing building adjacent to an existing strip mall. This facility is located in close proximity to what is considered Illinois' premier shopping mall, Oak Brook Center. In addition to the new building, ICI was responsible for a much-needed expansion of the existing parking lot as well.

As part of the scope of work, International Contractors, Inc. demolished two homes and relocated existing gas and telephone utilities. An underground water retention system was

constructed under the new parking lot in order to compensate for a high water table area.

ICI successfully limited disruption to nearby stores by properly screening work areas and scheduling work so it would not interfere with daily activity.

The new shopping center is constructed of masonry and dryvit with a partial copper metal roof. The design of the new plaza aesthetically blends with the surrounding business and community.
